

McKesson Automation Solutions

McKesson Automation Solutions' goal

To ensure the success of its hospital customers by providing services and technologies that:

- ⊕ automate the entire medication-use process to reduce system-wide medication incidents and increase efficiency;
- ⊕ free health care professionals' time for clinical activities;
- ⊕ provide real-time integrated data to clinical staff throughout the continuum of care.

Medication Safety Analysis Service

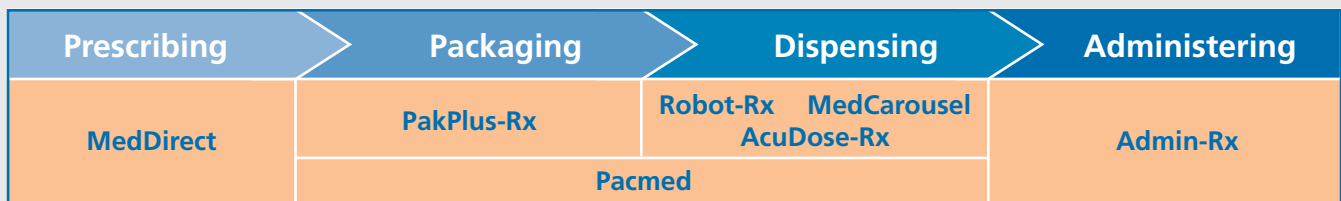

Provides hospitals with an analysis of its current medication distribution and administration processes to determine if re-engineering and bar code automation can improve patient safety.

This analysis includes an initial orientation meeting with department directors, extensive data collection and analysis, process redesign, interviews with hospital staff and a meeting to present different automation scenarios and discuss appropriate next steps.

In providing a better understanding of current processes, this study helps hospitals assess positive impacts of re-engineering on their strategic goals.
